

I Excel in Engineering and Hands- On Activities

Alex Hodapp, Grade 11
Franklin County High School

My name is Alex Hodapp. I excel in engineering and hands-on activities because I enjoy discovering how an object's individual parts interact mechanically. I am very good at math which is an essential skill in the engineering field. I also enjoy trying to solve/complete "brain bending" puzzles such as Rubik's Cubes. I am also great at thinking logically. I am very creative and capable of thinking outside of the box, another essential skill to have if you are an engineer. These are just some of the reasons why I excel in engineering and hands-on activities.
