

I Excel in Creativity

Josiah George, Grade 7
Brookville Middle School

In elementary school, I did a lot of art and classroom projects. I really enjoyed coming up with an idea for a project and then creating it. I feel the most creative when I build statues and characters out of clay and scrap metal. I get to do this at my dad's shop. One of my favorite statues was of a praying mantis that I made out of scrap metal in fifth grade for a recycling project. I plan to attend college in the future and use my creativity in the engineering field.
